

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listing, of claims in the application:

LISTING OF CLAIMS

Claim 1. (presently amended): A breathing-speaking ~~Breathing-speaking~~ valve intended to be used as a speaking valve for patients requiring filtration of inspiration air inhaled via tracheostomas ~~and are~~ mounted on a trachea tube, which breathing-speaking valve includes a valve housing (1) intended to be attached, via its bottom (2), to the trachea tube and which comprises a check valve in the form of a membrane (10), which check valve opens when the patient inhales and closes when the patient exhales and a filter (7) for filtration of the inspiration air, which filter is located within this membrane (10), characterized in that the filter (10) is laying against a number of ribs (5) located in the bottom (2) of the valve housing (1) and a nipple for connection to an oxygen apparatus for oxygen delivery to the inspiration air and mounted substantially perpendicular to the a longitudinal direction of the valve housing (1) by the bottom of the valve housing (1), and said nipple (6) opens into the a space (14) defined by the ribs (5) and the bottom (2) of the valve housing (1) and also opens into the filter (7) parallel to the extension of the filter (7), whereby the distribution of the inspiration air and the optional oxygen delivery into the trachea tube takes place in said space (14) and in the filter (7).

2. (presently amended) Breathing valve according to claim 1, characterized in that an external humidifier is mounted to deliver humidity to the filter (7).

3. (presently amended) Breathing valve according to claim 2, characterized in that the humidifier is connected to the oxygen nipple (6) or to a special nipple on this oxygen nipple (6).

4. (presently amended) Breathing valve according to claim 1, characterized in that the thickness of the filter ~~(7)~~ is between 0,5 and 3,0 mm, preferably 2 mm.

5. (presently amended) Breathing valve according to claim 1, characterized in that height ~~hight~~ of the ribs ~~(5)~~ are between 0,5 and 3,0 mm, preferably 1 mm.

6. (presently amended) Breathing valve according to claim 1, characterized in that the nipple ~~(6)~~ for oxygen delivery have a diameter between 1,5 and 5,5 mm.
